

PROJECT

NADAPTA-CC

Integrated strategy for Climate Change adaptation in Navarre

NADAPTA-CC ensures the involvement and commitment of the relevant competent authorities to implement the project as Government of Navarra as Coordinator, public companies related to primary sector (INTIA), biodiversity and forestry (GAN), water (NILSA) and housing (NASUVINSA) and public university (UPNA) as research and education agent). The project also involves in the implementation to local, regional and national stakeholders.

This project has received funding from the European Union's LIFE Programme

01

The Challenge

Adaptation strategies to CC are needed not only at the international level of administration but also at the national, regional and local level.

National adaptation strategies are considered essential tools for promoting the coordinated and coherent action in the fight against the effects of CC. This need is justified in the variety and diversity of actors and agents of adaptation, in the fact that the effects of CC do not understand administrative boundaries and that affects all sectors and critical natural resources for different countries. Regional authorities are therefore ideally placed to be the key drivers in the implementation of adaptation measures in a variety of policy fields: spatial planning, public health, civil protection, risk management, energy, water supply and the environment

02

The Solution

In this context, the Government of Navarra has planned to execute the Integrated Project (IP) LIFE-IP NADAPTA with the aim of contributing to the full implementation of the Strategy against Climate Change of Navarra (SCCN). The IP will be focused on the implementation of some adaptive strategies in the top five priority sectors for adaptation implementation: Water, Agriculture, Forestry, Human Health and Spatial Planning. As well as mainstreaming adaptation objectives across different sectors, the NADAPTA project will promote the coordination with and mobilisation of other relevant European, National or private funding source to implement other complementary actions for the full implementation of the SCCN

03

Impacts

NADAPTA will help to coherently implement at regional level several direct and complementary actions to achieve the regional CC resilience. At the same time, it will ensure a high-quality multi-purpose delivery mechanism to achieve results and integrating CC in other policy areas (mainly in Water, Rural development, Agricultural policy, Biodiversity, and Health, but also in areas as Research, Education...)
