

PROJECT

ETIP HYDROPOWER

The goal of the new ETIP HYDROPOWER is to enhance the cooperation among diverse stakeholders in the hydropower industry to contribute to the Strategic Energy Technology Plan (SET Plan)

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union. Neither the European Union nor the granting authority can be held responsible for them.

01 Challenge

The ambitious energy targets in Europe require a series of changes towards the adoption of cleaner and low-carbon energy generation. Despite its development potential, hydropower faces a series of environmental, societal, technological and commercial challenges that require new approaches.

02 Solution

The new ETIP hydropower will integrate the results drawn from the Strategic Industry Roadmap (SIR) and the Research and Innovation Agenda (RIA), created under the H2020 project Hydropower Europe, into the SET Plan roadmap. More than 600 stakeholders participated in several consultation processes which brought to life 18 research themes and 11 strategic directions.

03 Impacts

The project will seek to consolidate the current network of more than 600 representatives from all the value chain of the sector into a sustainable association that will become the common and permanent voice of hydropower in Europe. It also aims to cooperate with similar fora to enhance joint implementation of activities supporting EU energy transition.
